## Education

**Bachelor of Software Engineering**, *Concordia University* · GPA: **3.4/4.3** Apr 2027

## Experience

**Agentic AI Intern**, *Xsolla* – Canada Sep 2026 – Nov 2026

- Building AI agents and integrations on Xsolla's commerce APIs and SDKs, shipping tooling for internal engineering teams and external game developers.
- Building an internal platform-as-a-service that provisions on-demand VMs for targeted test suites, and a Neo4j MCP integration exposing graph data to AI agents.

**Freelance Software Engineer**, *Self-Employed* – Remote Jul 2026 – Present

- Built a Grafana monitoring and alerting stack for a client's site, exposing ~50 req/s of bot vulnerability scans.
- Cut bot requests by 95% with rate limiting, header inspection, circuit breakers, and escalating IP bans.

**Software Developer Intern**, *Ericsson* – Montreal, QC Jan 2026 – Aug 2026

*Cloud-native IAM platform for a Tier-1 telecom (130M+ subscribers, 36K TPS)*

- **AI:** Cut a 2-day reporting workflow to ~4 hours with Claude Skills, MCP integrations, and subagents, keeping engineers in the loop to review critical output.
- **SRE/DevOps:** Mapped undocumented CI/CD pipelines across 20 microservices, then owned pipeline and cluster health for 5 releases, root-causing recurring failures (certificate flakiness, PVC deadlocks) with permanent fixes.
- **Software:** Built a Newman regression pipeline that runs Postman collections every release, cutting ~6 hours of manual testing to minutes.
- **Tooling:** Cut report generation time 60% by replacing brittle Selenium UI scraping with a direct Grafana REST API integration.

**Software Developer (Intern + Part-Time)**, *Novatek International* – Montreal Jan 2024 – Aug 2025

- Migrated 20+ years of production source code (700K+ commits, 200K+ files) from a failing legacy VCS with no working backups to Git, with zero data loss.
- Reverse-engineered the proprietary SDK to build fault-tolerant extraction tooling, using a batched external sort to stay within a 1.5GB JVM memory limit.
- Led the rollout phase part-time, scheduling Git cutover dates with team leads and managers across regions.

## Projects

**Co-Founder & Founding Engineer**, *Self-Maintaining APIs* – Montreal, QC Aug 2026 – Present

- Building an agentic system that detects third-party API breaking changes and drafts human-reviewed remediation pull requests in customers' repos.

**InfraChat** | RAG · Python Sept 2026

- Building a RAG QA system over the Kubernetes & Docker docs that answers with citations; measured each retrieval component (reranking, hybrid search) against a baseline eval set.

**QLoRA Fine-Tuning of LLMs** | Python · PyTorch Nov 2025

- Built a custom QLoRA fine-tuning pipeline for GPT-Neo and GPT-2, adapting <1% of parameters while maintaining strong performance on language modeling and sentiment tasks.

## Certifications

Anthropic Developer Certificates – *Claude Code, Agent Skills, Subagents, MCP* Apr 2026

Deep Learning Specialization – *DeepLearning.AI / Coursera* Jan 2026

## Technical Skills

**AI & Agents:** Agentic AI, MCP, multi-agent orchestration, LangGraph, PyTorch, LoRA/QLoRA

**Languages:** Python, TypeScript, Go, Java, SQL, Bash

**Cloud & DevOps:** AWS, Docker, Kubernetes, Helm, Git, CI/CD, Grafana, Prometheus, Kafka

## Leadership & Interests

**Leadership:** Team lead on university team projects through the full SDLC

**Interests:** Chess (2000 peak, Lichess), ping pong, boxing
